Clinical assessment

Report generated 2026-11-04 10:00:00 UTC
Report reference: 099e8312-9989-4f44-a7e2-ff47b509ef14

Patient and consultation

Patient	Meera Nair
Patient ID	ecb08537-8dbd-4013-b798-421bfc3ae8bd
Patient email	meera@example.invalid
Consultation type	Not recorded
Consultation	2026-11-12 09:00:00 UTC (pending)
Appointment reference	4011b5d5-db16-41f6-9c7f-1b94f766bbda
Assessment recorded	2026-10-20 10:58:23 UTC
Recording doctor	Asha Rao

Presenting complaint

Presenting complaint not recorded.

Symptoms

Reported by the patient
Itching; Skin rash

Recorded by the doctor
Nodal skin eruptions

Clinical observations and examination

Clinical observations (not interpreted by the model)

- Patient reports a mild headache after meals

Duration	3 days

Doctor's assessment and plan

Clinical assessment - doctor authored
Fungal dermatitis is most likely.

Treatment and follow-up plan - doctor authored
Review in 1 week.

Structured medication, dosage and frequency information was not recorded in this assessment. Consult the doctor-authored plan for any instructions.

Model output

Experimental decision-support suggestion - not a confirmed diagnosis.

Predicted condition	Fungal infection
Model version	9167ccc09a8b0dc4
Symptoms used by the model	3

This model version does not provide a calibrated probability, so no confidence percentage is reported.

Fungal infection is a common skin condition caused by fungi.

Guidance from the dataset

General dataset-associated guidance requiring clinician review. It is not a prescription, dose or individually validated treatment plan.

Precautions

- keep infected area dry

Medication information

- Antifungal Cream

Diet

- Probiotics

Workout

- Stay hydrated

Follow-up and recording clinician

Separate follow-up instructions not recorded. See the doctor-authored plan.

Recording doctor	Asha Rao
Record created	2026-10-20 10:58:23 UTC
Report created	2026-11-04 10:00:00 UTC

Disclaimer

Experimental decision support, not a confirmed diagnosis.

HelloDoc is an experimental decision support prototype. Dataset suggestions require clinician review and are not individualized prescriptions. Confidential: share this report only with the patient and authorized care providers.
